Packaging enhancements to the world-class range of plasma-derived therapeutics CSL Bioplasma fractionates for Australia

As part of CSL Bioplasma's commitment to supplying Australia's healthcare professionals a world-class range of plasma-derived therapeutics, CSL Bioplasma has recently conducted a full packaging review to ensure the carton, label, flip-off cap, and foil crimp of the plasma-derived therapeutics we fractionate for Australia are optimally designed to support correct and simple use.

The following packaging enhancements are now being introduced:

Product Cartons

- revised design that gives prominence to product name and presentation to optimise correct identification of product prior to infusion
- product and presentation colour coding in the top right hand corner of carton
- clear designation of ALBUMEX® and INTRAGAM® P presentations on cartons and labels as g per mL to simplify dosing calculations
- increased prominence of the distributor (Australian Red Cross Blood Service) and manufacturer (CSL Bioplasma) logos and contact details to facilitate ease of pharmacovigilance reporting
- 'crash-proof' design for cartons of all liquid products of 50mL or more to prevent the bottle falling through the base of the carton

- gloss coating on all cartons to enhance their ability to withstand moisture encountered during cool storage
- Mix2Vial™ reconstitution system 'Directions for Use' printed on the inside top flap of the PROTHROMBINEX®-VF carton, to ensure access to this information at time of reconstitution.
- the 10mL and 20mL WFI (with blue tamper evident flip-off caps and blue foil crimp) is packaged with:
 - BIOSTATE® 500IU
 - MONOFIX®-VF
 - PROTHROMBINEX®-VF
 - THROMBOTROL®-VF.
- the smaller 5mL WFI packaged with BIOSTATE 250IU has a green tamper evident flip-off cap and blue foil crimp.

Product Vials

- redesign of labels to align with the revised carton design, and to optimise correct identification of product prior to infusion
- product and presentation colour coding in the top right hand corner of labels
- tamper evident flip-off cap on each product vial has been changed to **red**, in line with the new carton and label design.

Water for Injections Vials (WFI)

- colour of the foil crimp on all WFI vials changed to **blue** to assist correct use of the Mix2Vial reconstitution system packaged with each vial of lyophilised product.

There is **no change** to:

- carton or label dimensions
- number of peel off labels
- shipper configurations
- barcoding
- item numbers for ordering
- Product Information or Consumer Medicine Information.

Easy 2 Use
Blue for Blue
